

**iRiS** is the perfect complement for schools that are making Google for Education and Chromebook their technology of choice to help transform education. Licenses are marketed under subscription with annual fee.

We have developed an “**all in one**” solution to help all the parties involved in a digital project to be successful: Head Teachers, ICT Administrators, parents and students.

Our software facilitates the task of the ICT Administrator, reinforcing and complementing the control and security functions that Google offers in its products, and all in **real time**.

### Classroom Management

Easy to use as well as effective. The software has been designed with the objective of avoiding distractions in the classroom, for the benefit of both students and teachers. The teacher, at any moment, can pause all the screens, block access to the Internet, as well as deactivate the Internet filter on all the students’ Chromebooks in **real time**, regardless of what network they are connected to. **This is a real innovation and solves the current connectivity issues.**

### Internet Filter

Students can always surf the web in a safe environment with their Chromebooks, either at school or at home. Teachers can deactivate this at any time within the classroom with a single click. The software incorporates the renowned Escudo Web® Internet filter, used by several local governments.

### Geolocation

This allows you to locate a lost or stolen Chromebook. The function is available for ICT Administrators only during school hours, but can also be used by parents from the Parental Interaction app, only when the Chromebook is not under the school’s control.

### Digital Wellbeing

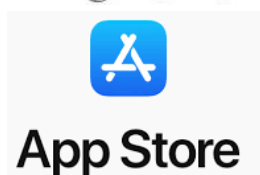

This is a system that allows the ICT Administrator or the parents to establish recommended breaks, such as during lunch time or at night. This functionality helps to prevent sleeping disorders and screen addiction.

## Analysis and Monitoring

This function allows an educational institution to collect information related to Internet browsing and videos viewed by the students. It provides very useful information, which will help with the decision-making process for the configuration of the Internet filter.

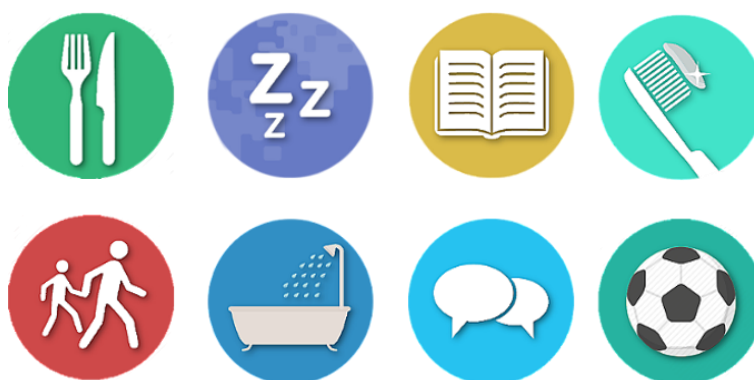

## NEW: DIGITAL PARENTAL INTERACTION

The **digital parental interaction** has been designed to favour the involvement of parents with the task of supervision, in addition to creating a new model for the digital coexistence at home, in keeping with the 21st century and digital natives. It facilitates the parents' involvement with the surveillance and safety of their children.

It is important to highlight that this function, configurable by the parents on their own phone, can be activated by the educational centre, only if it decides to allow them to do so.

The Parental Interaction app includes the innovative function **Please listen!** which allows parents to **instantly** pause their child's Chromebook for a limited time in order to perform a specific task, such as meal time, shower time, time to brush their teeth or have a chat.

The installation of **iRiS** solution can be done easily only by the ICT from Chromebook Admin console in a matter of seconds.

It is an innovative and decisive product, which adapts to all the organisational models that coexist in the schools, applying different usage policies at each educational level. It allows for evolution according to the level of maturity of the students, for example, some students after class could surf the web freely while others are protected by the Internet filter.

Without a doubt, this is the perfect complement to education based on Google for Education and Chromebook.
